Create your initial account settings for IMAP using the Outlook Express Wizard. Outlook will do this when you first run it or you can go to the Tools menu and select Accounts... then click on Add and select Mail...

Once these initial settings are configured you need to modify them. Go to the Tools menu and select Accounts... Select the your connection and then the Properties button. The relevant dialog box tabs should look similar to:

Thunderbird

Go to the Tools menu and select Account Settings... For Server Settings enable Use secure connection (SSL). The dialog box should look similar to:
Go to the **Tools** menu and select **Outgoing Server (SMTP)** then select **Edit...** For **SMTP Server** enter details as follows. The dialog box should look similar to:
